

# Topping Unit

Even coverage of Pizzas, Pies, and Ready Meals with accurate weight control.

- All machines are approved for use in USDA facilities and conform to all relevant hygiene and safety standards.
- Easily feeds free-flowing dry products and Individually Quick Frozen vegetables and meats.
- Can be configured for waterfall or targeted border-free product distribution.
- Quick change-over of food handling components

## Topping Unit Systems

Raque Food Systems topping depositing machinery can be supplied with traveling funnels for depositing border free ingredients such as shredded cheese, vegetables, meats, etc. Shells are conveyed so that they are timed to traveling funnels and product is deposited through the funnels onto pizza shells leaving a border free edge. Units can be designed with multiple lanes of operation with unique designs possible, such as half shell coverage or quarter shell coverage.

## System Integration

Pizza systems can be supplied with automatic shell dispensers and infeed indexers from customer's bakery to automatically transfer shells into the system. Converging or diverging conveyors can be supplied for freezer infeeds and freezer discharges.

Also available are dry spice dispensers, water spray conveyors, and handwork conveyors.

## Sanitary Construction

For more than three decades, Raque Food Systems has served the frozen and ready-meal industries with high quality, extremely reliable machinery. Built of durable food-grade material, Raque machines are truly designed to stand the test of time.

Additionally, Raque designs machines that are easy to clean. The Topping Dispenser can be cleaned in just a few simple steps.

## Optional Equipment

A full range of accessory equipment and options are available including:

- Product Return Conveyor
- Variable Speed
- Integrated Cheese Shredding Systems
- Automated Feed Systems
- Freezer / Oven Loading Systems
- Customized according to your product specifications

For example, the Product Hopper can be supplied with feedback control hardware to signal for additional product. High and low set points can be adjusted so consistent product level in the hopper can be maintained, thus providing better weight control.
